Novel human drug metabolizing polypeptide, useful in diagnosis, prevention or treatment of autoimmune/inflammatory, cell proliferative, neurological, developmental, endocrine, metabolic and gastrointestinal

Claim 65; Page 155-156; 169pp; English

The invention relates to an isolated human drug metabolising enzyme (DME) and its nucleotide. DME is useful for diagnosing, treating or preventing conditions of the nucleotide with abstrant expression of DME, where the disorders selected from autoimmune/inflammatory disorder such as acquired immunodeficiency syndrome (AIDS), asthma, atherosclerosis, psoriasis, proliferative disorder such as arteriosclerosis, proliferative disorder such as arteriosclerosis, proliferative disorder such as arteriosclerosis, and cancer; a neurological disorder such as CC already, hepatitis, and cancer; a neurological disorder such as CC already, hepatitis, and cancer; as renal tubular acidosis, epilepsy, astemata; an endocrine disorder such as renal tubular acidosis, epilepsy, an eye disorder such as conjunctivitis, glaucoma, cataract; metabolic disorder such as conjunctivitis, glaucoma, cataract; metabolic disorder such as anorexia, peptic ulcer, and liver disorders. DME is useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. The invention is useful for creating

                                                                                                                                                                                                                                                                                                                                                                                         Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be CC used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorder, endocrine CC disorder, neurological disorders, developmental disorders, or CC infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline CC gene therapy. The present sequence represents a dithp protein of the CC invention. Note: The sequence data for this patent is not represented in CC the printed specification, but was obtained in electronic format directly CC from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Schmidt JP, Wright RJ, Bruns CM, Marjanovic MM, Shen F; Harthshorne TA, Suchorolski MT, Altus CM, Pitts SJ, Elder LV Mooney EM, Delegeane AM, Panesar IS, Banville SC, Reddy TP; Stevens KA, Blanchard JL, Panzer SR, Wang X, Au AP, Gerstin Peralta CH, Anderson SB, Rioux P, Shen EJ, Wu MC, Stuve LL; Lagace RE, Spiro PA, Stewart EA, Wingrove J, Vitt UA, Kirto Xu Y, Kwong M, Policky JL, Hurwitz BL, Ma Y, Jackson JL, Capatury S, Shi X, Suarez CJ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                        The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA5433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                               Sequence
                                                                                                                                                                                       New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy.
                                                                                                                                                                               Claim

New isolated NOVX polypeptide useful for treating atherosclerosis, metabolic disorders, diabetes, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease and cancer.

Claim ; Page 303; 666pp; English.

The invention relates to human polypeptides, termed NOVX, and the polypurcleotides encoding them. The polypeptides and polynucleotides are useful for diagnosing disease, and screening for potential therapeutic agents. The sequences are useful for treating metabolic disorders, cardiomyopathy, diabetes, hypertension, congenital heart defects, ortic stenosis, atrial septal defect (ASD), atrioventricular canal defect, ductus arteriosus, pulmonary stenosis, subsortic stenosis, ventricular septal defect (VSD), valve diseases, tuberous sclerosis, scleroderma, atherosclerosis, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease, parkinson's disease, immune disorders, haematopoietic disorders, haemophilia, hypercoagulation, Crohn's disease and cancer. Sequences ABUS4542-ABUS4647 represent human NOVX polypeptides invention

The invention may be useful for the development of compounds with a cytostatic, immunosuppressive, CC antiinflammatory, endocrine, ophthalmological, gastrointestinal or CC hepatotropic activity acting as an agonist or antagonist of drug CC metabolising enzyme activity. The invention may be used in the diagnosis CC and treatment of disorders associated with decreased or increased CC expression or activity of drug metabolising enzymes. Such disorders CC include cancer, cell proliferative disorders, autoimune/inflammatory, endocrine, eye, gastrointestinal (including liver disorders) and CC metabolic disorders. The present sequence is that of a human drug CC metabolsing enzyme (DME) of the invention. Note: This sequence disorders are form part of the printed specification but was obtained in electronic format from EPO.
                                                                                                                                                                                         В

The invention discloses a polynucleotide comprising a sequence selected CC from 1970 fully defined nucleotide sequences which encode novel CC polypeptides. Also claimed is a polypeptide encoded by the polynucleotide CC or its partial peptide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide of the polynucleotide by contacting the polypeptide or peptide or cCC with the antibody of the encoded protein, and observing the binding CC with the antibody of the encoded protein, and observing the binding CC expressible manner and an antisense polynucleotide. The oligonucleotide in an CC expressible manner for synthesising the polynucleotide, or as a probe for detecting the polynucleotide. The oligonucleotide cCC is useful as a primer for synthesising the polynucleotide, or as a probe for detecting the polynucleotide. The polynucleotide and encoded cCC genes may be included in them, for developing a diagnostic marker or compression are useful as pharmaceutical agents and many disease-related cCC genes may be included in them, for developing a diagnostic marker or compression. The genes are involved in tissue and/or cell constitute, or as targets of gene therapy. The genes are involved in tissue and/or cell transcription-related proteins, signal transduction-related proteins, constitute, or as targets of gene therapy. The genes are involved in tissue and/or cell transcription-related proteins, disease-related proteins and genes considered them can be used as indicators for diseases (e.g. osteoporosis, the activity or expression of the encoded protein to treat diseases. The sequence presented is a protein of the invention. Note: Some of the sequence data for this patent is not represented in the printed consideration of fire and the printed consideration of the sequence information supplied by the

The present sequence represents a cat cauxin protein (I) or its salt, which is cat kidney disease marker. Also described: (1) a partial peptide (II) of (I); (2) a nucleic acid (III) encoding (I) or (II); (3) a vector (IV) comprising (III) or (II) by culturing (V) comprising (III) or (IV); (5) producing (I) or (II) by culturing (V); (6) a antibody (VI) which couples specifically with (I) or (II); (7) diagnosing cat kidney disease which involves measuring (I) quantitatively, and where reduction of amount of (I) indicates presence of the disease; (8) a cat kidney disease diagnostic agent comprising (I) labelling agent, a reagent which measures the biological activity of urinary (I) or (VI); and (9) a cauxin
                                                                                                                                                                                                                              Novel cauxin protein or its salt, useful and for diagnosing cat kidney disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                detection kit which measures cauxin in a test sample. (I) is useful cat kidney disease marker and (VI) is useful for disgnosing cat kidney disease. (I) enables detection of cat kidney disease simply and correctly. (I) provides an early marker for the disease, and replace complicated diagnostic methods such as X-ray imaging, ultrasonic imaging the disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 542 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 blood testing.

Secreted proteins and polynucleotides useful as vaccines for preventing or treating various diseases e.g. cancer, wounds, atherosclerosis, Parkinson's disease, Alzheimer's disease, infection, autoimmune disorder.

Claim 1(a); Page 315; 335pp; English.

The invention relates to an isolated polypeptide with signal sequences CC which allow it to be secreted extracellularly or membrane associated. The activity of polypeptides of the invention may be described as, CC cycostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic, CC neuroprotective, immunosuppressive, haemostatic, antinflammatory, CC cardiant, antiulcer, virucide, antithyroid, cerebroprotective, anorectic, and metabolic. Polypeptides and polymucleotides of the invention are compared to the invention of, cancer, wound healing disorders, infection, atherosclerosis, Parkinson's disease and Alzheimer's disease, autoimmune disorder, haematopoletic disorder, inflammation, neoplastic diseases, nervous system related disorders and cardiovascular disorders, pancreatitis, respiratory disorders, compared to hyperproliferation, systemic autoimmune disease, hyper-immunity, cancer, compared to the cardiovascular diseases, marroad diseases, sperm dysfunction, thyroid disorders e.g. hypothyroidism, brain damages, colitis, cone photoc transduction deficiency, neurological diseases, stroke, angiogenesis,

Novel human carboxylesterase-like enzyme polypeptide, regulators of which are useful for preventing and treating organophosphorus intoxication, cancer and osteoporosis.

Disclosure; Fig 8; 92pp; English.

The invention relates to a purified human carboxylesterase-like enzyme CC polypeptide. Carboxylesterase-like enzyme and its DNA are useful for CC screening for agents which decrease or modulate the activity of carboxylesterase-like enzyme polypeptide. Carboxylesterase-like enzyme is CC carboxylesterase-like enzyme polypeptide. Carboxylesterase-like enzyme is CC disease, such as organophosphorus intoxication, cancer and osteoporosis. CC compounds that increase the ability of human carboxylesterase-like enzyme cc to bind to organophosphorus compounds are useful as detoxifying agents. CC carboxylesterase-like enzyme agonists and antagonists are useful for CC particularly dental implants. Carboxylesterase-like enzyme is useful in CC diagnostic assays for detecting diseases and abnormalities or susceptibility to diseases or abnormalities related to the presence of cutations in the nucleic acid sequences which encode the enzyme. The CC in gene therapy and for generating antisense oligonucleotides or carboxylesterase-like enzyme polynucleotides or carboxylesterase-like enzyme polynucleotides or carboxylesterase-like enzyme polynucleotides or carboxylesterase-like enzyme polynucleotides are useful for modulating carboxylesterase-like enzyme gene expression. The CC useful for modulating carboxylesterase-like enzyme gene expression. The present sequence is rat carboxylesterase-like enzyme protein

The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the CC isolation and characterisation of the DNA and protein sequences of the CC invention. The breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; nontropic; antinflammatory; antiulcer; vulneray; anticonvulsant; antidabetic; antifulgal; antiparastic and cardiant activity. The polynucleotide and CC antifungal; antiparastic and cardiant activity. The polynucleotide and CC protein sequences are used in the diagnosis of cancer, particularly conditions agonists may also be used in the diagnosis, prevention and treatment of immune disorders e.g. Addison's diagnosis, prevantion and treatment CC disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; cardiovascular disorders such as myocardial ischaemias; wound healing; infertions dispasses such as cerebral anoxia and epilepsy; and
                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 549
